

7-METRE TRIPOD STAND

For 'live streaming'...

The BROGE camera tripod is a lightweight stand that extends to 7.3-metres (24ft) and is ideal for a variety of applications including sports analysis and filming.

Made from lightweight aluminium this mast is extremely portable, quick to set-up and easy to use. With its own tripod style base, which always remains attached and just folds up for transport, the mast provides a rigid base and each section of the mast can be easily raised by hand.

At the top of the mast there is a standard 1/4" camera thread attachment to which you would usually attach a ball head, tilt head or powerhead, so the camera can then be positioned to the desired angle. Once the camera is in position you can then use a tablet or viewing monitor to see and control your images. Operating from a higher view point drastically changes the picture you can capture, and these masts can be utilised outdoors or indoors depending upon the application they are needed for. Holdalls are included as standard.

Please feel free to get in touch in with a member of the sales team at sales@compositepoles.co.uk, or +44 1626 839 965, and quote the code CA2019 to get your special price.
